PROFILE

I'm Arga Nur Pratama, my friend usually call me Arga. I get informatics engineering in Telkom University. I have studied in 3rd year, so I must take internship in company or others. I'm active in organizations and lab. But just for this year, I leave my activity in laboratory. My reason to do this because I have given the mandate as a leader in Student Representative Council. I think my responsibility to student is bigger than my responsibility to laboratory. I used to teamwork, because I have principle if there are more people in around me our work will completed easily and quickly. Join at organizations make me have many experience especially in mass communication. Interesting in political, business, and other social side. Eventually I love IT as my other life. I want to combine my skills in social and IT such as build website for social news, build website for social media and etc. Writing is my hobby so if you want to see my article you can visit my tumblr above. My character sometimes can be patience, but if reach a limit can be out of control.
